MICHIGAN FARMERS MARKETS Responding to COVID-19

Whatever role you serve at your farmers market, we know that not only are you dedicated to ensuring shoppers have access to healthy, locally grown food and other high-quality products — but you’re also deeply committed to the safety of shoppers and the products they purchase. Never in MIFMA’s history has this mission been more important. In response to COVID-19, we want to share with you the following guidance and considerations on operating farmers markets in Michigan during this period of heightened public safety.

Farmers market managers should consult their local health departments and the State of Michigan for information pertinent to COVID-19 and current conditions in their community.

You can regularly read the updates and recommendations available on their websites and sign up for any alerts offered by state or county-level health officials to stay the most up-to-date with what is being recommended or required.

Governor Whitmer’s Executive Order 2020-21 issued on March 23, 2020 instructs all Michigan residents to “suspend activities that are not necessary to sustain or protect life,” but allows individuals to leave their homes “to obtain necessary services or supplies for themselves, their family or household members, and their vehicles.” The order further clarifies which businesses and operations provide critical infrastructure and may remain in operation during this time, including food and agriculture related functions. Additionally, the Michigan Department of Agriculture and Rural Development clarified as of March 24, 2020 that workers in Michigan’s food and agriculture sector who support “retail that sells food and beverage products” constitute “critical infrastructure workers.”

Accordingly, farmers markets and farm stands selling food products can continue to operate.
1. The State of Michigan has determined that farmers markets are among critical infrastructure that can remain open while non-essential businesses have been temporarily suspended. The guidance listed in this document for modified operations should be implemented to support the safe operation of farmers markets for customers, vendors, and market staff. However, due to rapidly evolving conditions and local variations on the intensity of the pandemic, county health departments may need to make different determinations about whether markets can operate safely in their locality. Contact your county health department to review these recommendations together and discuss their guidance for your community.

2. Farmers markets are being allowed to stay open because they are a critical component of our food system; however, market operations will need to be modified to focus exclusively on executing this function in the safest possible way. The recommendations in this document intentionally limit the function and features of a farmers market to food and personal hygiene purchases at this time. This makes for a very different farmers market experience from what you may typically provide, so your market should consider whether it can operate under these new conditions.

3. Consult with your vendors, particularly your farmer vendors who have perishable products which they may be relying on your market to help them sell.

4. Whether or not your market chooses to open, consider alternative ways you can support vendors and customers during this time, such as:
   a. Helping to connect customers with farms directly through their websites.
   b. Helping to facilitate online sales, product aggregation, delivery and/or pick-up options.

5. Communicate proactively with both vendors and consumers regarding your decision to operate or suspend the farmers market, including noting that this situation can change at any point. Make sure they know which channels you will use to communicate any changes (emails, website, social media, etc.).
FARMERS MARKETS MUST:

• Limit the types of products sold to only food, personal hygiene products and pet food/treats.
• Eliminate all non-essential areas and activities such as music, seating areas, special events, and children’s activities.
• Suspend all product sampling and cooking demonstrations.
• Direct prepared food vendors and food trucks to comply with regulations for restaurants in Michigan by offering only packaged items to take home and restricting customers from eating food on-site.
• Prepare and provide Critical Infrastructure Worker documentation to essential market staff and essential volunteers.
• Increase market stall spacing and aisle widths whenever possible to allow customers and vendors to distance themselves from others.
• Have vendors set up in a way that minimizes/eliminates a customer’s ability to touch the products.
• Provide handwashing and sanitizing (when available) at entrances and throughout the market. Ensure someone’s job at the market is to make sure stations are continuously stocked with soap, paper towels, waste receptacles and hand sanitizer (when available).
• Require the use of disposable gloves for market staff who handle money, tokens, or vouchers, and remind staff about proper glove use and handwashing procedures.
• Regularly clean and disinfect frequently touched surfaces, like point-of-sale devices, tokens, etc.
• Communicate and reinforce best practices for washing hands and covering coughs and sneezes.
• Place visible signage throughout the market with CDC-recommended safety and behavior guidelines.
• Be flexible with vendor attendance, eliminate penalties or absence fees.

FARMERS MARKETS MAY WANT TO CONSIDER:

• Provide customers with relevant, up-to-date information about what your market is doing to ensure their health and welfare at the market.
• Post signs with your precautions and procedures and communicate this information on your website and through social media.
• Limit the number of customers who can be in the market at one time.
• Limit entrances to ensure customers enter where a handwashing station is available.
• Form lines outside of vendor booths and/or limit the number of customers within a booth at one time.
• Mark the ground around booths with items such as tape, chalk, driveway markers, or traffic cones to encourage customers to distance themselves while they are waiting in line.
• Recommend that vendors use disposable gloves appropriately as an additional tool, but remember that gloves do not replace the need to wash hands and practice good hand hygiene.
• Consider developing curbside pickup and/or drive-through options where customers can select and purchase items without getting out of their car.
STEPS FARMERS MARKET VENDORS SHOULD TAKE TO PROTECT THEMSELVES AND CONSUMERS:

• Do not attend the market if you have a compromised immune system and/or are not feeling well.
• Sanitize your market equipment and containers. Look to the Centers for Disease Control and Prevention (CDC) Environmental Cleaning and Disinfection Recommendations for guidance.
• Have a handwashing station (preferred) or hand sanitizer at your booth and use it often.
• Pre-package all items before coming to the market as applicable.
• Clearly and legibly post product lists with prices so that customers can distance themselves from you and your booth and still see what you have to offer.
• Set up your booth in a way that minimizes/eliminates a customer's ability to touch your products. For example, set up a table in front of you with a product list and a table behind you with the product. Customers can tell you what product(s) they want and you can get it for them.
• Put less product out for display and restock more often.
• Only use market table covers that can be sanitized throughout the market day, such as plastic or vinyl.
• Minimize cash transactions and round prices to the nearest dollar to reduce the need to exchange coins.
• During the market, routinely clean and disinfect “high touch” items such as tables, cash boxes, and touch screens on point-of-sale devices.
