Michigan Farmers Markets Responding to COVID-19

Whatever role you serve at your farmers market, we know that not only are you dedicated to ensuring shoppers have access to healthy, locally grown food and other high-quality products – but you’re also deeply committed to the safety of shoppers and the products they purchase. Never in MIFMA’s history has this mission been more important. In response to COVID-19, we want to share with you the following guidance and considerations on operating farmers markets in Michigan during this period of heightened public safety. The guidance below, originally issued by MIFMA on March 27, 2020 has been updated based on the June 5, 2020 Executive Orders 114 and 115. New or modified information is in italics.

Farmers market managers should consult their local health departments and the State of Michigan for information pertinent to COVID-19 and current conditions in their community.

You can regularly read the updates and recommendations available on their websites and sign up for any alerts offered by state or county-level health officials to stay the most up-to-date with what is being recommended or required.

As a follow up to the March 23, 2020 Executive Order 21, Governor Whitmer’s Executive Orders 2020-114 and 2020-115 issued on June 5, 2020 provide further instructions and specifications to the Michigan public. This latest guidance continues to open up additional portions of our state’s economy and further eases restrictions in MERC Regions 6 and 8.

Farmers markets and farm stands can operate for the retail sale of all products, provided they follow health and safety practices.
WHEN DECIDING WHEN/IF TO OPEN YOUR MARKET:

1. The State of Michigan has determined that farmers markets are among critical infrastructure that can remain open while certain non-essential businesses have been temporarily suspended. The guidance listed in this document for modified operations should be implemented to support the safe operation of farmers markets for customers, vendors, and market staff. However, due to rapidly evolving conditions and local variations on the intensity of the pandemic, county health departments may need to make different determinations about whether markets can operate safely in their locality. Contact your county health department to review these recommendations together and discuss their guidance for your community.

2. Farmers markets are being allowed to stay open because they are a critical component of our food system; however, market operations will need to be modified to focus on executing this function in the safest possible way. The recommendations in this document intentionally limit the function and features of a farmers market to retail purchases at this time. This makes for a very different farmers market experience from what you may typically provide, so your market should consider whether it can operate under these new conditions.

3. Consult with your vendors, particularly your farmer vendors who have perishable products which they may be relying on your market to help them sell.

4. Whether or not your market chooses to open, consider alternative ways you can support vendors and customers during this time, such as:
   a. Helping to connect customers with farms directly through their websites.
   b. Helping to facilitate online sales, product aggregation, delivery and/or pick-up options.

5. Communicate proactively with both vendors and consumers regarding your decision to operate or suspend the farmers market, including noting that this situation can change at any point. Make sure they know which channels you will use to communicate any changes (emails, website, social media, etc.).
FARMERS MARKETS MUST:

- Starting June 4, 2020, markets may resume sales of all products allowed by the market’s rules and policies as long as spacing allows vendors and customers to remain at least 6 feet apart.
- Eliminate all non-essential areas and activities such as music, special events, and children’s activities.
- Starting June 4, 2020, markets may allow seating areas, provided groups and parties maintain a 6 foot distance and the area is sanitized after each use.
- Suspend all product sampling and cooking demonstrations.
- Mark the ground around booths with items such as tape, chalk, driveway markers, or traffic cones to instruct customers to distance themselves at least 6 feet apart while they are waiting in line.
- Provide customers with relevant, up-to-date information about what your market is doing to ensure their health and welfare at the market. Post signs with your precautions and procedures, and communicate this information on your website and through social media.
- Post signs at the market entrance informing customers not to enter if they are or recently have been sick.
- Enclosed, indoor markets should post signs instructing customers of their legal obligation to wear a face covering while indoors if medically able to do so.
- **Except for markets in MERC Regions 6 and 8,** limit the number of customers who can be in the market at one time in order to ensure that everyone within the market is able to maintain proper social distancing - 6 feet of space between people.

For indoor markets:
- Markets of less than 50,000 square feet of customer floor space should limit the number of people in the space (customer, vendors, employees and volunteers) to 25% of the total occupancy limit established by the State or local fire marshal.
- Markets with more than 50,000 square feet of customer floor space should limit the number of customers (excluding employees) to 4 people per 1,000 square feet.

For outdoor markets:
- Calculate the total square footage of customer floor space in your market and divide that by 113 (the square footage of a circle with a 6 foot radius) for the maximum number of people that should be in your market at one time. For example, if your market’s footprint is 5,000 square feet, limit the number of people in your market at one time to 44 people (5,000/113).

- Direct prepared food vendors and food trucks to comply with regulations for restaurants in their MERC Region. Individual markets should determine if they have the resources to safely offer on-site consumption of prepared foods, or if offerings should be limited to packaged items that can be taken off-site.
- Increase market stall spacing and aisle widths to allow customers and vendors to distance themselves at least 6 feet away from others.
- Have vendors set up in a way that minimizes/eliminates a customer’s ability to touch the products.
- Ensure someone’s job at the market is to make sure stations are continuously stocked with soap, paper towels, waste receptacles and hand sanitizer (when available).
**FARMERS MARKETS MUST:**

- Regularly clean and disinfect frequently touched surfaces, like point-of-sale devices, tokens, etc.
- Communicate and reinforce best practices for washing hands and covering coughs and sneezes.
- Place visible signage throughout the market with [CDC-recommended safety and behavior guidelines](#).
- The employer of market staff must have a COVID-19 preparedness and response plan in place and available at the market. The plan must be consistent with the [Guidance on Preparing Workplaces for COVID-19](#) developed by the Occupational Health and Safety Administration (OSHA).
- The employer of market staff must train their employees on at least the following: workplace infection-control practices, the proper use of personal protective equipment (PPE), steps to notify their employee of any symptoms or confirmed COVID-19 cases, how to report unsafe working conditions, how to manage symptomatic customers upon entry to the market, and how market management will notify staff if they learn that a confirmed case of COVID-19 has visited the market.
- The market must ensure all employees and volunteers have access to a mask or face covering. Masks should be worn in any enclosed space by anyone who is able to medically tolerate wearing a mask and whenever you are interacting with customers.
- Develop a [daily screening policy](#) that identifies and prevents market employees and volunteers from entering the market if they display respiratory symptoms or have had contact with a person with a confirmed diagnosis of COVID-19.
- **Except for markets in MERC Regions 6 and 8,** if your indoor market has more than 50,000 square feet of customer floor space, create at least 2 hours per week of dedicated shopping time for vulnerable populations.
- Provide handwashing and sanitizing (when available) at entrances and throughout the market.

**FARMERS MARKETS MAY WANT TO CONSIDER:**

- Consider developing curbside pickup and/or drive-through options where customers can select and purchase items without getting out of their car.
  - When adapting a curbside pick-up or drive through option, consider ways in which customers can safely participate in the market if they do not have a car.
- Limit entrances to ensure customers enter where a handwashing station is available.
- Form lines outside of vendor booths and/or limit the number of customers within a booth at one time.
- **Ask that vendors consider using disposable gloves appropriately as an additional protection, but remember that gloves do not replace the need to wash hands and practice good hand hygiene.**
- **For outdoor markets,** encourage customers who are able to medically tolerate wearing a mask to wear a mask or face covering.
- Place additional handwashing stations near outdoor seating and dining areas.
- **Be flexible with vendor attendance, eliminate penalties or absence fees.**
- **Recommend the use of disposable gloves for market staff who handle money, tokens, or vouchers,** and remind staff about proper glove use and handwashing procedures.
**STEPS FARMERS MARKET VENDORS SHOULD TAKE TO PROTECT THEMSELVES AND CONSUMERS:**

- Do not attend the market if you have a compromised immune system or would answer Yes to any of the [screening questions for market staff and volunteers](#).
- Develop a [daily screening policy](#) that identifies and prevents your employees from attending the market if they display respiratory symptoms or have had contact with a person with a confirmed diagnosis of COVID-19.
- Ensure that all employees have access to a mask or face covering. Masks should be worn in any enclosed space by anyone who is able to medically tolerate wearing a mask and whenever you are interacting with customers.
- Sanitize your market equipment and containers. Look to the Centers for Disease Control and Prevention (CDC) [Environmental Cleaning and Disinfection Recommendations](#) for guidance.
- Have a handwashing station (preferred) or hand sanitizer at your booth and use it often.
- Pre-package all items before coming to the market as applicable.
- Clearly and legibly post product lists with prices so that customers can distance themselves from you and your booth and still see what you have to offer.
- Set up your booth in a way that minimizes/eliminates a customer's ability to touch your products. For example, set up a table in front of you with a product list and a table behind you with the product. Customers can tell you what product(s) they want and you can get it for them.
- Put less product out for display and restock more often.
- When possible, staff your booth with two people with distinct roles where one person handles the currency transaction with the customer while a second person handles the product. These two individuals should maintain their distinct roles and wash their hands if/when they switch between the task of handling currency versus handling product.
- Only use market table covers that can be sanitized throughout the market day, such as plastic or vinyl.
- Minimize cash transactions and round prices to the nearest dollar to reduce the need to exchange coins.
- During the market, routinely clean and disinfect “high touch” items such as tables, cash boxes, and touch screens on point-of-sale devices.
- Train your employees on at least the following: workplace infection-control practices, the proper use of personal protective equipment (PPE), steps to notify their employee of any symptoms or confirmed COVID-19 cases, how to report unsafe working conditions.
**FOOD LICENSES:**

*Executive Order 109* creates special considerations for renewing food licenses during this critical response time. As a market manager or a licensed food vendor, please be aware of the following:

- License and registration expiration dates for food licenses have been extended until 60 days after the end of the declared states of emergency and disaster. Late fees may not be assessed during the 2020–2021 license year.
- A license holder may be eligible for a special transitory temporary food unit for the 2020–2021 licensing year even if the license holder received only 1 evaluation during the 2019–2020 licensing year.
